Access Control Solutions by Access Control Professionals

ABDi Alarm Interface:

Alarm monitoring of homes is a multi-billion dollar industry, with some primary monitoring companies located halfway across the country. Even if the primary monitoring company is comparatively near the resident, there is little personal bonding or relationship between the homeowner and the alarm company.

The real security relationship is between the gatehouse personnel and the resident of the community. Knowing that this relationship can be strong, and realizing that most security personnel begin to identify with the residents, **ABDi** feels that a secondary monitoring system is in order, and there is no better place for it to be installed than in the community-manned gatehouse.

The alarm emits its signal to the primary monitoring company. The gatehouse is also informed that an alarm has gone off in the community. This secondary alert pulls information from the **ABDi** community database and the gatehouse is alerted to the alarm source, a particular zone at the house that is sounding the alarm, the address of the residence, driving directions to the home, and finally, any special instructions for the gate personnel.

It is exactly this type of unique, creative programming that allows **ABDi** to efficiently customize its access control systems, both **CMS** and **SAS**, to the specific needs and desires of the community. **ABDi** is best at understanding problems, reacting to them in a positive manner, and making intelligent business decisions when creating our customized modules.
